

Handicap Conversion Table

Instructions:-

- 1) Obtain individual players' handicap groups from Individual Handicaps' sheet.
- 2) Calculate starting score from grid below e.g. a group 12 player against a group 16 player would start at 10-14 playing up to 21.
- 3) For doubles matches add a team's doubles pair's individual handicaps together and divide by 2 to obtain their Doubles group. Round down any fractions e.g. group 10 player + group 13 player = a group 11 doubles pair. Then calculate starting scores as in (2) above.
- 4) Each player has 2 serves in turn. If play starts at an odd number score e.g. 15-10, the first server will have only 1 serve. After that point each player will have 2 serves in turn.
- 5) Each game must be won by at least 2 clear points.
