## Volcrepe Cup Handicap Adjustments 2017

This sliding scale system seemed to work last year, but it was only needed once, so it is still on trial. There is a slight refinement for the upper rebates, so don't use last years sheet.

Handicap difference

446 to $450 \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots \ldots$ (lower team needs approx. 10 pts/game)
441 to 445............................................ 95
436 to 440........................................... 90
421 to 435........................................... 88
416 to 420........................................... 86
411 to 415............................................ 84
406 to 410............................................ 82
401 to 405........................................... 80
396 to 400........................................... 78
391 to 395........................................... 75
381 to 390............................................ 72
371 to 380............................................ 68
361 to 370............................................ 63
351 to 360........................................... 59
341 to 350............................................ 54
331 to 340........................................... 49
321 to 330............................................ 45
311 to $320 \ldots \ldots \ldots \ldots \ldots . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . ~ 40$ (lower team needs approx 6 pts/game)

For large handicap differences, points will be given back to the upper team according to the above scale. Differences below 311 will be used without adjustment.

The stronger team will start on zero and the adjusted handicap difference will be added to the score of the weaker team.

Good luck to everyone, and please give me feedback on any aspect of the handicapping system, I am open to suggestions, and will take seriously any points that are made to me. ( Don't ask me to change your handicap before the competition is over, unless obviously unfair). Barry.
